

14th PCNE working conference

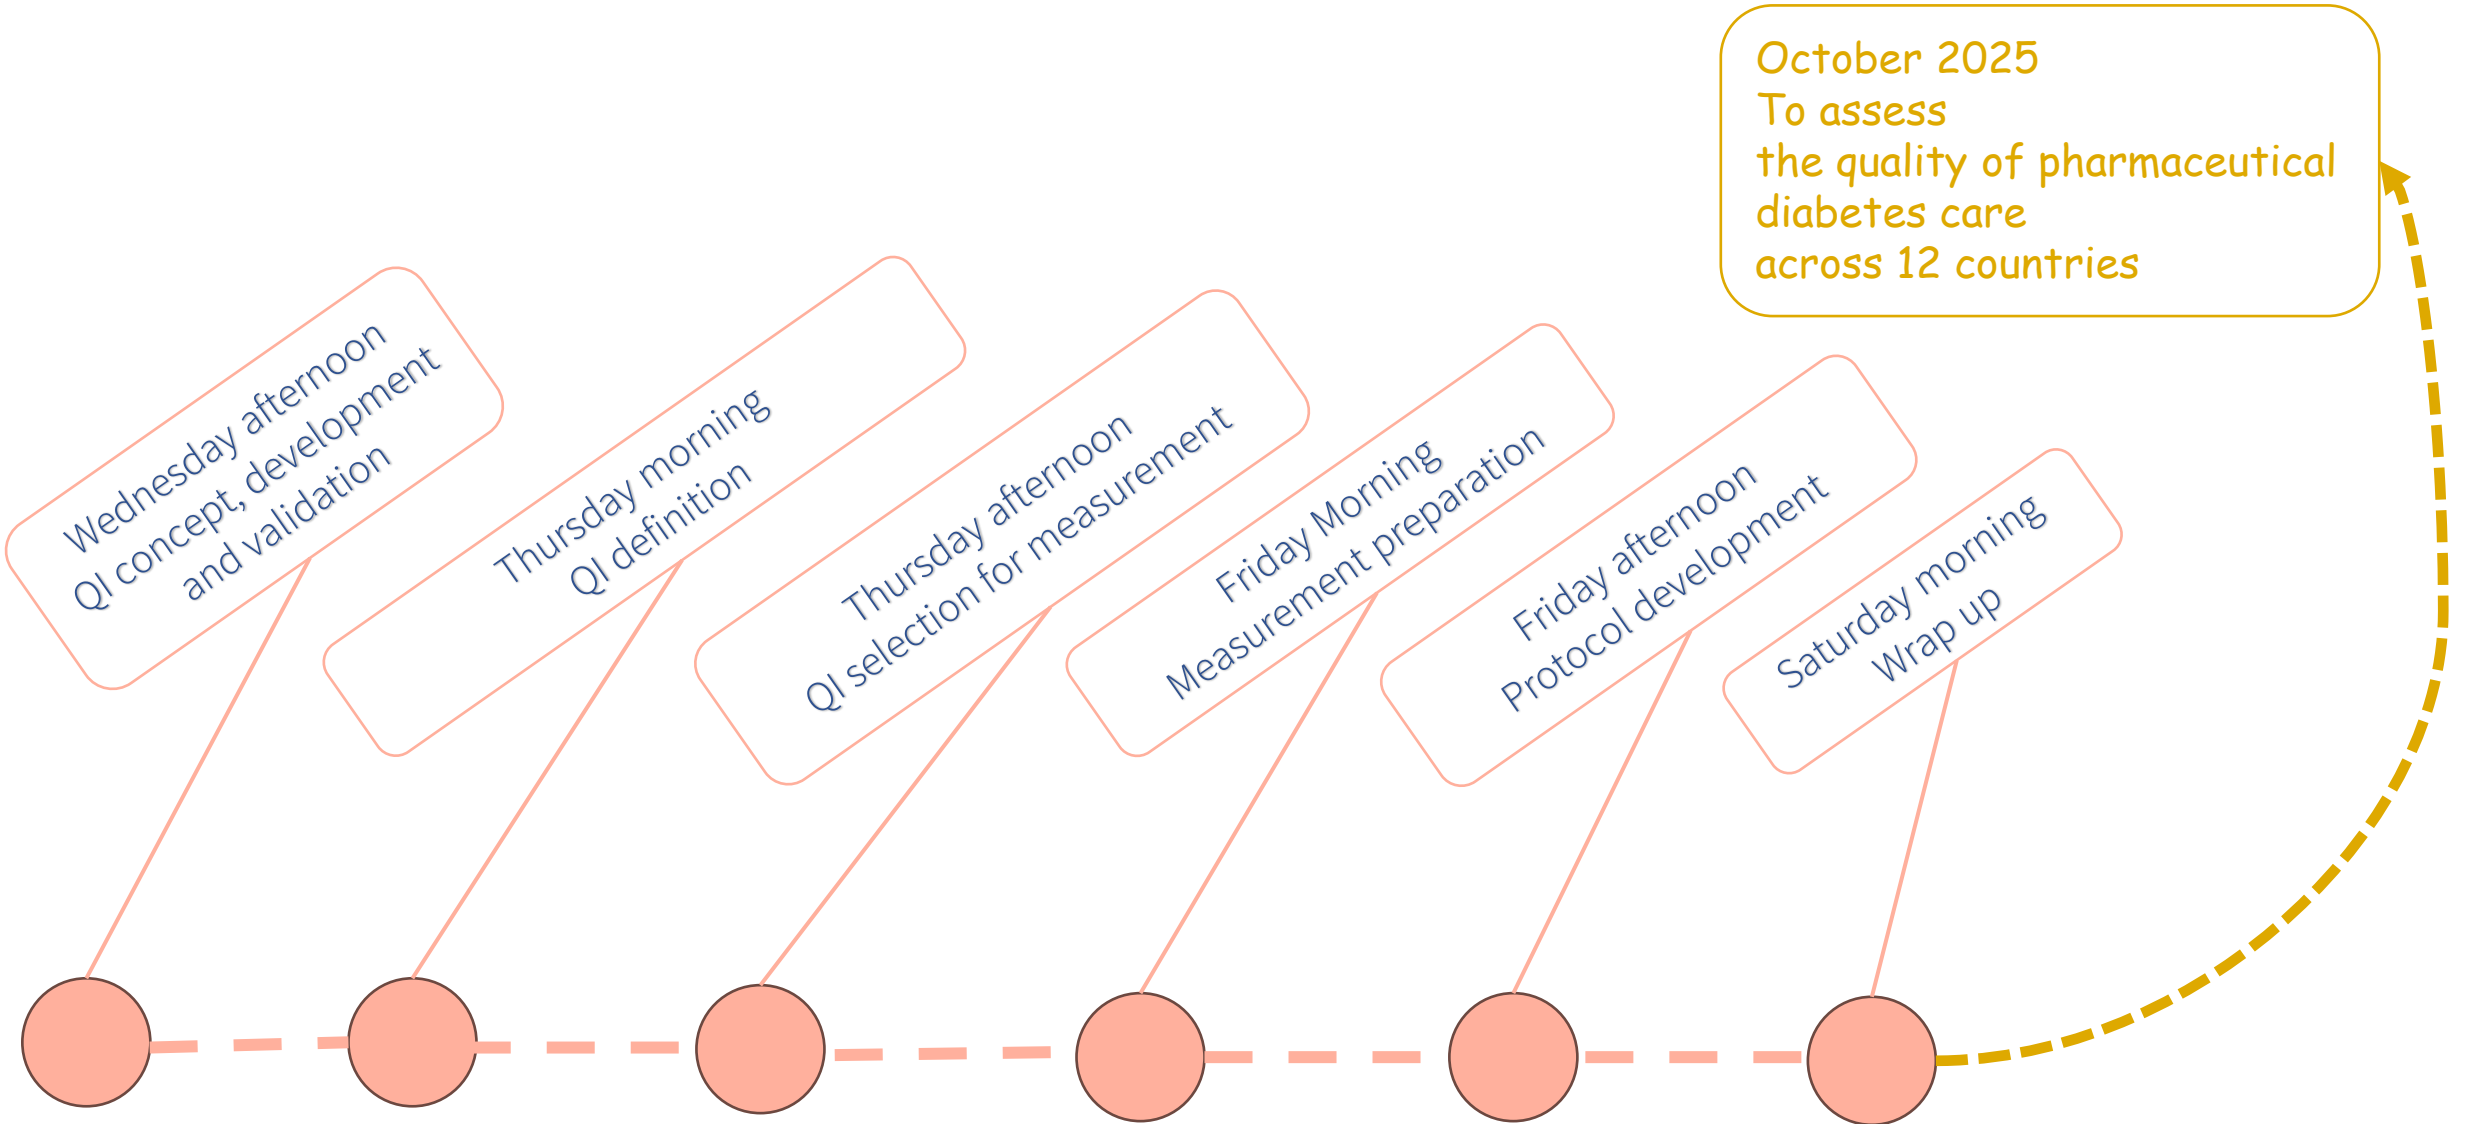

5th – 8th February 2025

Workshop 3

QI on pharmaceutical diabetes care

Define QI

16 toppers

Select QI

PCNE working group Guidelines & Indicators

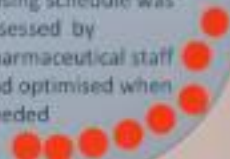

"To assess the quality of pharmaceutical diabetes care across 12 countries in Oktober 2025"

Please prioritize the Quality Indicator you would like to receive information about (place 1 sticker per person please)

% of persons living with type 2 diabetes using metformin whose renal function was taken into account by pharmaceutical staff at least once within the past 12 months

% of persons living with diabetes on medication whose dosing schedule was assessed by pharmaceutical staff and optimised when needed

% of persons living with diabetes who understood how to realize whether their medication is working

% of persons living with diabetes facing adherence barriers who had solutions proposed by pharmaceutical staff

% of persons living with diabetes who understood their disease

Discussed how to organize QI measurement

Formulated a research question and started writing a protocol

Follow-up

- + Continue our monthly online working group meetings
- + Invite PCNE members from additional countries to join
- + Establish national leaders for national measurement
- + Write the protocol
- + Confirm QI choice, define and translate them
- + Support the national leaders in inviting and supporting
community pharmacists

.....

Present our results in Innsbruck 2026

Thanks to

Ready to go

Thank you!
